*Application No. 10/759,661
Amendment dated August 16, 2007
Reply to Office Action of June 6, 2007*

AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph [0014] with the following amended paragraph.

[0014] In accordance with still another aspect of the present invention, there is provided a computer program product including a computer usable medium having computer readable program code embodied thereupon, and having means contents for passing parameters of data structures where an API and corresponding stored procedures are at different version/release levels. Program code is provided for receiving a data structure comprising data structure elements from a calling program and parsing the data structure for a version identifier. Other program code compares the parsed version identifier to a stored procedure version identifier. If the comparison program code determines a data structure compatibility between the calling program and the stored procedures, parsing program code parses all received data structure elements. If, however, the comparison program code determines a data structure incompatibility between the calling program and the stored procedures, the parsing program code parses only data structure elements known to both of the calling program and the stored procedures.
